High Performance Urethane Impact Bar

CSIC-WB-18

Wear Area

Entire area is wear surface. Carriage bolt heads are protected so that they don't come in contact with belt.

\* NOTE: Please contact your Classic representative to determine exact contour measurements for a custom fixed wing impact cradle.

### Classic service support.

We will custom fit a fixed wing or retro-fit an adjustable wing impact cradle to any existing conveyor system. Our crews are available to serve you 24 hours a day - 7 days a week. As always, we stand behind every job 100%.

# Classic Heavy Duty Impact Cradles

**C**lassic impact cradles offer excellent support at impact points on your conveyor system.

These cradles are easier to install, more portable and built ruggedly for underground and other demanding installations. You'll find typical Classic heavy-duty construction throughout including

quality stainless steel hardware. Handles are provided on each side so that two men can pick and carry the cradle.

A very practical feature is our modular, building block concept. This allows you to utilize 2, 4 or however many cradles necessary to make up the exact length of bed that you need for your application.

## Adjustable Wing Model

The Classic adjustable version cradle has adjustable wings which can be set from 0° (flat) up to 45°. Wings are also easy to remove for installation and maintenance.

## Fixed Wing Model

As an option, we can supply a permanent, fixed curve to meet the contour of your belt. This custom fit provides maximum support across the surface of the belt. Contact your Classic representative for help with measuring this special fit item.
