Classic Slider Beds

Classic now offers you the perfect solution to impact management and load support for your conveyor system. Although impact protection is a key issue – you’ll find the benefits of proper load support, house-keeping and maintenance to be equally as important.

Classic slider beds are designed to support belts at transfer points. They replace impact idlers that are failing. They also provide superior load support, impact absorption and sealing at transfer

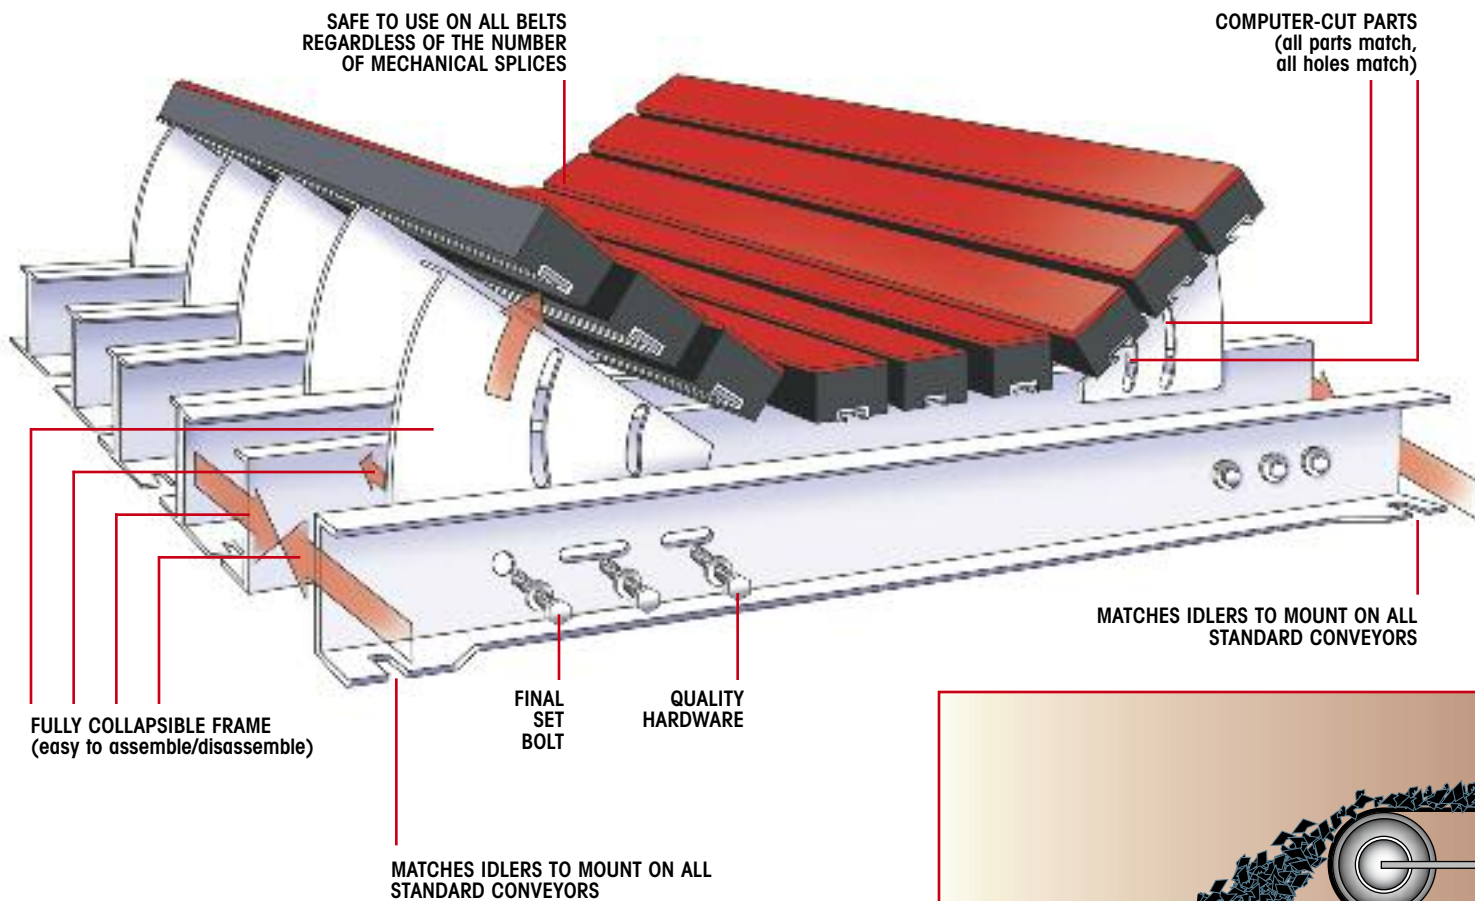

points when used in conjunction with skirting. Standard size beds are **IN STOCK** to handle 18" to 108" wide belts and custom designs are available.

Classic Simplicity and Functionality

The trademark of Classic is to find a better way. Once again we’ve done it by offering a completely modular slider bed to make it easier to install.

The beds are collapsible. They disassemble and re-assemble for quick and easy installation in the tightest areas. Also, impact bars can be installed and/or changed without removing the belt.

Classic slider beds can be set at any angle from 0° (flat) to 35°. An additional benefit is that they can be transitioned for use in tailpieces, etc. at any degree and any combination. In other words, you can set one end of the bed at 20° and the other at a 35° angle.

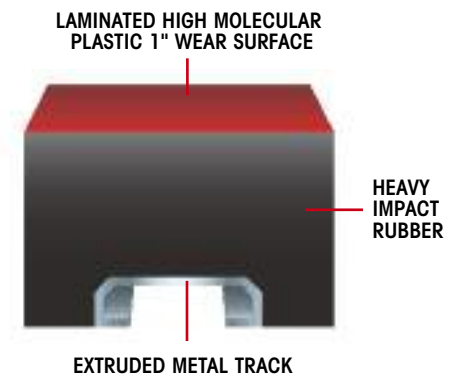

Classic Impact Bars

Constructed with a high molecular plastic bonded to a quality rubber to assure excellent impact absorption and long life. We use a hot vulcanized, laminated bonding process so there are no exposed bolts to damage your belt. Our laminations are 100% guaranteed against coming apart.

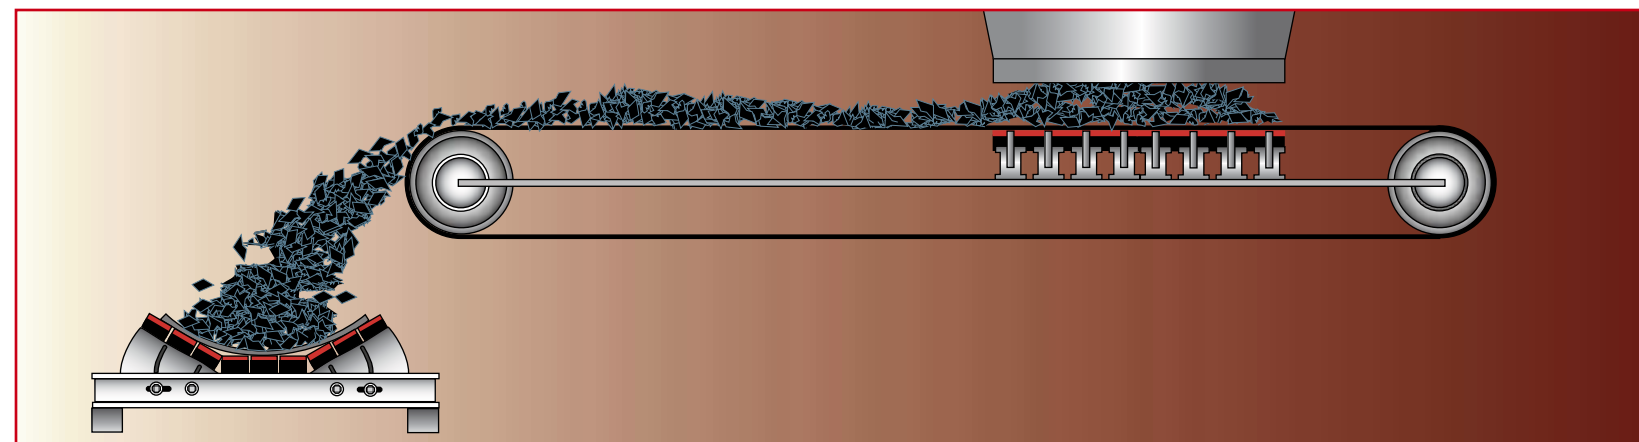

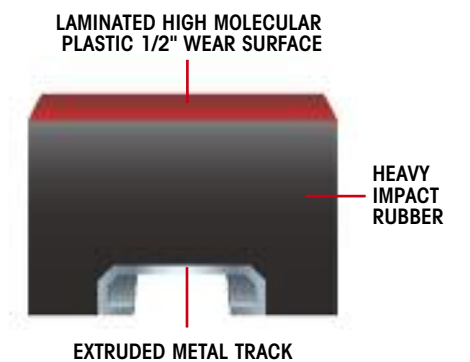

Other features include:

- Easy maintenance – bars can be changed without raising or lowering belt
- Any length bar available as required
- Completely interchangeable with most other slider bed designs
- Custom designs available
